

Systematic reviews of randomized clinical trials (RCTs) synthesize the results of these studies, reducing the likelihood of errors. Cohort study - monitoring the fate of people with common characteristics.

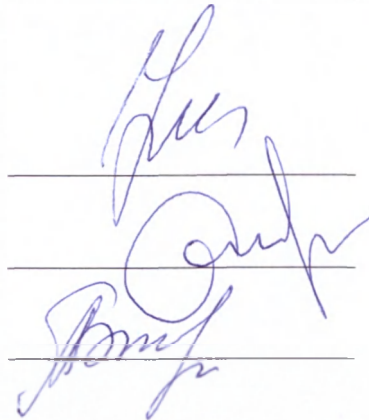

In a case-control study, people are compared to a particular disease or results ("case") with people from this population who do not suffer from the disease or who do not have the result ("control"), in order to identify the relationship between the result and the preliminary influence of certain factors.

Іванов І.І.

Сідоров С.С.

Петров П.П.

The image shows three handwritten signatures in blue ink, each written over a horizontal line. The signatures are stylized and cursive. The top signature is the most complex, with many loops and flourishes. The middle signature is simpler, with a large initial letter. The bottom signature is also simple, with a large initial letter and a few strokes.
